

RAM *amps* SH:OK (Clean Boost)

This pedal can push a valve amp to work harder and gives a richer, fuller sound with no obvious tonal coloration. It can also make an old weak guitar pick-up sound as if it were brand new. It will honestly make your rig sound like there are 4 cabs under it. It just makes it a bigger sound with the feeling of more power.

All RAM pedal are hand made by Mike Pears here in Middlesbrough.
